

Monthly Inspection Check List

Air Compressor Relief Valve

Each month air compressor relief valves shall be checked for designed operation and the inspection will be recorded on this form.

1). Using the pull ring, pull the relief valve open. The valve should open easily. If not, shut the unit down and refer to the owner's manual for corrective procedures. If the unit cannot be corrected it shall be tagged out of service (refer to LOTO practices) and notify your Department Head.

2). Release the pull ring. The relief valve should quickly and easily close. If not, shut the unit down and refer to the owner's manual for corrective procedures. If the unit cannot be corrected it shall be tagged out of service (refer to LOTO practices) and notify your Department Head.
