

## **SUGGESTED PLANT MATERIAL APPENDIX CITY OF MCCOMB CITY, MISSISSIPPI LAND DEVELOPMENT ORDINANCE**

**It is the intent of this listing to share with you plant material that has a proven track record for success in the area.**

**The City of McComb would like to insure the continuance of its green canopy and encourage each business or residence to include trees in its landscape design. It is recommended that large trees be planted at least 50' from a structure to prevent structural damage during storms.**

**Late fall planting is the most successful time to establish a new landscape without irrigation. If landscapes are installed at other times, some form of timed irrigation is encouraged.**

**A landscape maintenance plan is an integral part of each landscape design, and each property owner is responsible for the maintenance of the property to the street gutter.**

**One of McComb's greatest natural gifts is the perfect pH for growing azaleas. The City of McComb would like to encourage every landscape to include the large native azaleas as a part of the landscape design. Where partial shade is available, they can be planted to form excellent hedge rows requiring little maintenance.**
